

# PC TRANSPARENT

## POLYCARBONATE TRANSPARENT

Material description

PC is an amorphous thermoplastic with a number of remarkable properties. PC is transparent and has high light transmission. Its high rigidity is combined with excellent impact strength down to a temperature range of -80 °C. PC is also self - extinguishing and absorbs very little moisture. On the downside, it is notch - sensitive and susceptible to stress cracking.

These technical data have been determined as average values by our suppliers from many individual measurements. In all measurements, the test specimens were tested in the dry state. We pass on the data with reservation. The table does not claim to be complete or correct. Material technology is subject to constant further development. No rights or guarantees can be derived from it. Own tests are necessary because the environmental and operating conditions (humidity, temperature, mechanical forces, radiation and chemicals, etc.) set limits in the application.
