## POLYAMIDE 6.6 WITH GLASS FIBRE

### Material description

PA 6.6 GF is reinforced with approximately 30 % short glass fibres. Compared to unreinforced PA 6.6, this material achieves improved values in dimensional stability, stiffness, hardness and heat resistance.

These technical data have been determined as average values by our suppliers from many individual measurements. In all measurements, the test specimens were tested in the dry state. We pass on the data with reservation. The table does not claim to be complete or correct. Material technology is subject to constant further development. No rights or guarantees can be derived from it. Own tests are necessary because the environmental and operating conditions (humidity, temperature, mechanical forces, radiation and chemicals, etc.) set limits in the application.
