

PC 20% GF

POLYCARBONAT WITH GLASS FIBRE

Material description

PC GF is reinforced with approximately 20 % short glass fibres. This increases the flexural strength 2-3 times compared with unreinforced PC. The glass fibre reinforcement also increases hardness, stiffness, compressive strength, modulus of elasticity and flexural strength. PC GF achieves exceptionally good values for notched impact strength.

These technical data have been determined as average values by our suppliers from many individual measurements. In all measurements, the test specimens were tested in the dry state. We pass on the data with reservation. The table does not claim to be complete or correct. Material technology is subject to constant further development. No rights or guarantees can be derived from it. Own tests are necessary because the environmental and operating conditions (humidity, temperature, mechanical forces, radiation and chemicals, etc.) set limits in the application.
