

# PEEK 30% CF

## POLYETHER ETHER KETONE WITH CARBON

### Material description

PEEK 30% CF is reinforced with 30% carbon fibres. It thus achieves the highest strength values in the PEEK family. Due to the carbon fibre content, the thermal conductivity is increased and the material is no longer electrically insulating.

These technical data have been determined as average values by our suppliers from many individual measurements. In all measurements, the test specimens were tested in the dry state. We pass on the data with reservation. The table does not claim to be complete or correct. Material technology is subject to constant further development. No rights or guarantees can be derived from it. Own tests are necessary because the environmental and operating conditions (humidity, temperature, mechanical forces, radiation and chemicals, etc.) set limits in the application.
